

ABSTRACT

Reagents for use in preparing a therapeutic liposome composition sensitized to a target cell are  
5 described. The reagents include a liposomal  
composition composed of pre-formed liposomes having an  
entrapped therapeutic agent and a plurality of  
targeting conjugates composed of a lipid, a hydrophilic  
polymer and a targeting ligand. The therapeutic,  
10 target-cell sensitized liposome composition is formed  
by incubating the liposomal composition with a selected  
conjugate.
